RESEARCH INTERESTS	
I. Harmonic Analysis on Manifolds:	
<ul style="list-style-type: none"> Detailed study of the relationship between the growth estimates (L^p, bilinear, multilinear, and gradient estimates) of the eigenfunctions and the global geometric properties on compact manifolds. Apply the eigenfunction estimates to study the location, distribution and size of nodal sets of eigenfunctions, and to study Hörmander multiplier problems, Bochner-Riesz means for eigenfunction expansion on compact manifolds. Apply the eigenfunction estimates for spectral projectors on manifolds (with or without boundary) to study well-posedness problems for partial differential equations on compact manifolds, including linear or nonlinear wave equations, Schrödinger equations, 2D (dissipative) quasi-geostrophic equations, and 2D Euler equations. 	
II. Nonlinear differential equations:	
<ul style="list-style-type: none"> Study Li-Yau type sharp differential Harnack inequalities, the heat kernel estimates, and the monotonicity of entropy for linear heat equations and Schrödinger operators on Riemannian manifolds with negative Ricci curvature. Study Liouville's Theorems for Schrödinger operators on Riemannian manifolds with nonnegative Ricci curvature. Study gradient estimates for degenerate parabolic equations and Liouville's Theorems, local Aronson-Benilan estimates and entropy formulae for Porous Media Equations and Fast Diffusion Equations. Study the global uniqueness problems and the boundary stabilization, controllability and observability problems for (linear and nonlinear) parabolic and hyperbolic PDE's on manifolds via Carleman estimates. Study the Periodic solutions, subharmonics and homoclinic orbits of Hamiltonian systems. 	
THESIS	
<p>1. Master Thesis: Periodic solutions of Hamiltonian systems and differential systems. Nankai Institute of Mathematics, Tianjin, China, June 1999.</p> <p>2. PhD Thesis: Eigenfunction Estimates on Compact Manifolds with Boundary and Hörmander Multiplier Theorem. Johns Hopkins University, Baltimore, Maryland, May 2004.(PDF)</p>
